177 695 The handling of this evidence is woefully unskilful, but important distinctions must be made. Where the writing takes the place of the notches that used to be cut on sticks to indicate the cattle that had passed, it tends to be accepted if there is other supporting evidence; statements in a letter of the amount of money sent with the letter are generally given credence; but sentiments expressed in letters and written accounts of the circumstances of a case are usually completely ignored or dismissed as unimportant. In one case where a husband wrote that he had definitely deserted his wife, the court ignored the letter on the ground that, unless the husband gave his evidence in person, he might well reverse his attitude and appeal to the Native Commissioner. The subject of the development in the handling of written evidence is a large one; but to what we have said we would merely add that the recording of evidence in writing has been attempted, since 1932, in only fifteen cases all told. The attempt has miserably failed. The usual record reads approximately as follows: 'Andrew Malopo v. £19. 5 Jim Malate 2/8/32', and to that cryptic statement nothing is added by way of such embellishment as the nature of the case, whether the date refers to the day of trial or retrial or payment, whether in fact there has been payment, and so on. Native Commissioners have sometimes tendered advice about how cases should be decided and recorded, but it is beyond their province, and the results have been precisely nil.

177 642 Political institutions have suffered no fundamental change. External relations are maintained through the wives the queen still receives from, and the rain she still gives to, foreign chiefs; the suppression of military exploits and cattle raids has not affected the Lovedu. Relations with European authorities have modified initiative and control over large spheres of policy, for the tribal authorities receive instructions rather than discuss suggestions, though consultation is nowadays a recognized preliminary to the introduction of an innovation. The tribal gathering (*khiviji*) never was important in Lovedu; now it discusses perhaps more tribal matters than in the past, as well as European proposals and demands, but it has little power. The councillors, presenting European matters, sometimes give a distorted version, finding it difficult to justify either the measure proposed or their inability to bring about modifications or to circumvent it; and very often they do not mention important points at all. The widespread tendency to justify a desired action by saddling the European with responsibility for it reappears again and again. The people may be told by the councillors (who have a car) to mend the road, because, they say, an official who broke the spring of his car upon it has complained to the Native Commissioner; the administrative admonition to maintain better control over young boys going to work without their parents' consent was presented to the tribal meeting as a warning that boys not carrying tax receipts would be arrested if found at beer parties. (By traditional standards, now maintained with difficulty, beer parties are only for adults.) The justification or circumvention is upon the pattern that is known, and that pattern, despite the intervention of the European, remains intact.

177 231 654 Measures taken to protect national (South African) interests, such as

cattle-dipping, quarantine regulations, and the reclamation of the reserves, have increased in recent years. Unless some compromise can be reached in regard to the prohibition of cutting down trees, all the Native industries will be stamped out. The change from wattle and daub to sun-dried bricks for constructing huts began before the forestry regulations and is now accelerated, fortunately without causing a major disturbance. Dipping is regarded as a sinister device for keeping down the number of cattle—the hurried driving to and from the dip and the lack of care of wounded cattle or of those in calf do in fact cause deaths, but the absence of milch cows, also attributed to dipping, is the result of overworking the cattle, their poor quality, and inadequate grazing land. Natives believe that dipping exists for the special benefit of dipping officials, who come as poor men, but are rich when they leave. Dipping and quarantine regulations, as well as grazing fees in the Crown Lands, have led to complications in transferring the cattle of the marriage exchanges, driven out customs incipiently accepted from the West, such as cattle posts and cattle racing on the day of the first fruits festival, and introduced the conception of fees for *ku fisa*, the care of cattle by others.

But one of the most unsuspected results is the growth of a reluctance, not merely to slaughter, but also to sell cattle. The evil of this tendency is incalculable, but it is an inevitable result of modern conditions. Sales are difficult, because of the restrictions on movement and the absence of markets; the need to sell or to slaughter is smaller than it was because money is available and agriculture less precarious; the emphasis upon material possessions and the liberation among Christians of cattle from the chain of cattle exchanges tends to imbue them with new values. The tendency is for them to become a standard of wealth rather than a means of subsistence or of facilitating marriage. There is a strong aversion even to slaughter the cattle that used to be killed in marriage negotiations, their place being taken by money and clothes. A strong incentive to slaughter cattle cannot easily be created, since it is not meat, but beer, with which one regales one's neighbours and maintains a reputation for liberality. Among the Lovedu the growing anti-economic conception of cattle has nothing to do with their alleged sacredness.

Western culture has presented itself with a formidable problem. Improvement of stock by way of pedigree bulls, the Lovedu have decisively rejected: they suspect that the Government will claim perhaps the calves, perhaps some other right of interference. They have also for similar reasons refused other aid, such as the introduction of a suitable grass.

Not all the great changes in agriculture have come from the European. The Shangana-Tonga introduced valley cultivation, which was subsequently stimulated by congestion on the hills and by the greater ease of manipulating the plough in the valleys than on the hillsides. With the plough, rejected in its early heavy form, but accepted later when it became lighter, a new set of reactions started. Crops and beer became more abundant, the old forms of co-operative work were transformed, and the effect of the absence in town of the men was minimised. But the plough is destroying the protective verges of fields, sweeping away the borders
